Re: Application for IMDS Engineer Position

Dear Hiring Team at Substance Analyst,

I am writing to apply for the IMDS Engineer position at Substance Analyst. IMDS is not a compliance checkbox for me - it is what I actually do, every day. This role is genuinely what I have been looking for.

I have been at Methode Electronics since August 2022, initially as IMDS Coordinator and Design Assistant, stepping fully into the IMDS Engineer role from August 2023 onward. Over the past three years I have managed end-to-end IMDS material data submissions, handled Where Used Analysis, coordinated with Tier 1 and Tier 2 suppliers on REACH, RoHS, ELV, and SCIP requirements, and worked directly on BOM-level compliance documentation. Alongside my role at Methode, I have also been providing independent IMDS consulting to a confidential Tier 1 automotive supplier in Malta for the past year - so my exposure spans both in-house compliance and client-facing advisory work.

What draws me specifically to Substance Analyst is that IMDS is the whole point - not just a task buried inside a larger engineering role. I want to go deeper into this space, and your team looks like exactly the right place for that.

I hold IMDS certifications (Basics 6120, Advanced 6121, Release 14 6125) from IMDS Professional (an official DXC Technology partner), am based in Malta with an EU work permit, and can be available with 2 weeks notice. I am fully set up for remote work and comfortable with international client collaboration.

Please find my CV and supporting documents attached. I consent to the processing of my personal data by Substance Analyst Zenon Hibner, headquartered in Czesochowa, Wielkopolska 10, for the purpose of participating in the recruitment process.

Thanks for your time - happy to chat if the profile looks like a fit.

Best regards,

Pranesh Nallamuthu
